

FAIRBANKS MORSE DEFENSE FUEL SYSTEM UPGRADE

The FM PA6B Fuel System Upgrade is a comprehensive fuel system upgrade optimizing the fuel delivery and efficiency of the PA6B engine. The upgrade includes a conversion to electronic fuel injection and upgrading the existing injection nozzles using modern manufacturing techniques and improved materials to increase the nozzle hydraulic efficiency and fuel atomization.

- 3-5% Fuel savings
- Reduced emissions
- Improved fuel atomization providing complete and efficient combustion
- Extended injector nozzle maintenance interval
- Individual cylinder injection timing adjustments and optimization throughout the engine load range
- Non-invasive service that provides maximum uptime
