Federal Equipment Co. Overview

Fairbanks Morse Defense (FMD) and Federal Equipment Company (FEC) are a leading supplier for marine deck machinery and specialized weapons and material handling systems. Through the years the company has emerged into an internationally recognized organization with extensive expertise in marine design/engineering and manufacturing of critical shipboard systems.

Our early projects dealt with reengineering various deck machinery products with a focus on field service and parts. Over time, FEC has grown into a primary OEM providing deck systems including elevators, conveyors, dumbwaiters, cranes, hoists, lifts, winches, doors, and more. Additionally, our global presence has demanded maintaining service teams capable of being anywhere to ensure our customers fast, efficient, and reliable services.

FMD – Overview

Stacking the decks with best-in-class marine technologies and service solutions. Fairbanks Morse Defense has mastered that balance over more than a century, configuring the delivery of every customer engagement to meet the needs of the moment. We deliver an advantage to the U.S. Fleet with a growing array of best-in-class marine technologies, OEM parts, and turnkey services – all from a single, trusted source.

FEC Facilities Overview

- HQ in Cincy 80,000 SF, machine shop, fab shop, high bay, Eng/PM/Admin
- Two 30,000 SF plants, fab shop, high bay, crane access, conveyor/hangar door fab/test
- Additional plant expansions underway, ~50,000+ SF (Assembly) & ~40,000+ SF (Warehouse)
- Complete machining capabilities for milling, turning, grinding, & gear manufacturing
- CNC Lathes, Horizontal/Vertical Machining Centers, Jig Boring, Wire EDM, & OD Grinding Machines
- Fabrication capabilities including welding and metal working (e.g., CRES, Al, Ni-Cu, HY's, HSLA, etc.)
- Multiple state of the art CNC Machining Centers, continuous upgrades with new machine procurements
- Mil-spec qualified welders/NDT (e.g., MIG, TIG, stick, flux core, VT, PT, MT, etc.)
- Sheering, Bending, Punching, Rolling & many other fabrication capabilities
- Quality IAW ISO 9001(QA tools include ZEISS CMM Machine & FARO Laser Tracker)
- Specialized Eng/Design team, from complex developmental systems to BTP (3D modeling, FEA, Shock/DDAM, Controls, FAT quals, etc.)

Primary CNC Machines

- MC1210
- Viper 3150
- Haas EC1600
- Haas VF3
- Haas VF6
- Haas TM 2P
- Doosan DMN 5700
- Vision Wide
- Union Floor Mill

WEAPONS & MATERIAL HANDLING SOLUTIONS

ADVANCED WEAPONS ELEVATOR (AWE)

The Advanced Weapons Elevator (AWE) was developed collaboratively working with MagneMotion and key stakeholders from Newport News Shipbuilding and NAVSEA. Originating as a concept during the early phases of new aircraft carrier design studies intending to replace the Nimitz class carriers, the design was eventually selected for the CVN 78 Ford Class.

The main goal of the new weapons elevator was to improve the rate of weapons movement on the ship from magazines to the topside and visaversa, commonly referred to as strike-up and strike-down. The AWE consists of a ropeless elevator system utilizing linear synchronous motors (LSM), advanced control systems, wireless technology, as well as many other innovative subsystems.

The initial AWE design endured extreme qualification trials including shock, vibration, and EMI tests along with extensive load and reliability testing. Ultimately, the AWE system successfully achieved the 24,000 pound rated load capacity and 150 feet per minute speed requirement exceeding the legacy system capacity and speed by over 200% and 150%, respectively.

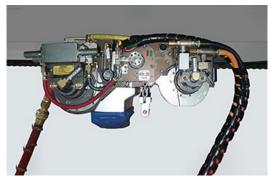

HOISTS

FMD has become the Navy's leading choice for specialized hoists utilized for critical handling of various weapons and cargo. Our hoists can be found throughout weapons magazines and aviation maintenance spaces on aircraft carriers and amphibious ships.

Most notably, FEC's development and production of a new concept, low headroom trolley type pneumatic hoist helped to resolve a fleet wide obsolescence issue. These hoists are typically used to facilitate weapons assembly and transfer onboard the ship. As such, they undergo extreme qualification and load testing including shock and vibration testing.

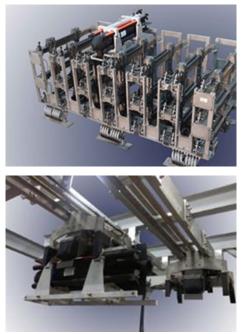

Additionally, we can furnish a variety of hoists for shipboard applications in accordance with customer requirements. Manual chain hoists, electric hoists, wire rope or chain, of varying capacities and lifts can also be provided. Related hoisting accessories such as pendant controls, monorails, turntables, and track clamps can be included upon request. All hoist components whether air, electric, or manual powered are tested and certified in accordance with applicable specifications.

SURFACE MINE NEUTRALIZATION SYSTEMS (SMNS)

To supplement FEC's variety of Navy weapons handling equipment (WHE), our specialized weapons design team developed the storage and handling system for the Surface Mine Neutralization System (SMNS) working with Lockheed Martin Corporation. Implemented on mine counter measure (MCM) vessels such as the Avenger Class ships, the system is utilized to stow the SeaFox unmanned underwater vehicle (UUV). The SeaFox UUV's are deployed primarily for mine disposal as well as intelligence and surveillance missions.

The SeaFox storage and handling system consists of two main components, the rack and the hoist. The rack assembly provides safe and efficient stowage for the SeaFox and is fully shock qualified in accordance with MIL-S-901. The robust design is completely marinized incorporating shock isolation mounts to sustain the extreme forces of a shock event as well as sea states. The hoist assembly is utilized to lift and transport the SeaFox UUV's in preparation for launch. The motors are pneumatically operated with one motor to raise/ lower the vehicle and another to traverse the space. The SeaFox drones are stored in two separate spaces so two hoists are required along with 3 unique racks per shipset.

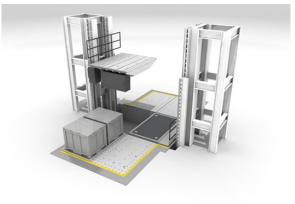

AUTOMATED SHIPBOARD MATERIAL HANDLING

As an innovative leader in shipboard material handling systems, FEC has been a key contributor to an Office of Naval Research (ONR) led consortium focused on automating cargo transfer and stowage onboard the ship with the goals of reducing manpower and improving material flow rates. As part of a five-year program, we designed and developed a working prototype to automate shipboard material handling, referred to as High Rate Vertical to Horizontal Material Movement (HRVHMM).

The HRVHMM system incorporates linear motors for both horizontal and vertical propulsion of an aluminum payload carrier rated to handle loads up to 6,000 pounds. The automated loading and unloading of the elevator coupled with a split elevator platform design helps alleviate many of the bottlenecks experienced by ships force during replenishment operations by smoothly transferring cargo from the storeroom horizontally to the elevator for vertical transport. Along with these additional capabilities, the ship can maintain the benefit of using the system as a conventional elevator as required.

The system consisted of one cantilevered split elevator platform with horizontal material movement in both the fore/aft and athwartship directions. With continued support from the ONR sponsored team, FEC modified and installed the HRVHMM on the USNS Washington Chambers (T-AKE 11) for operational sea trial testing.

DECK MACHINERY SOLUTIONS

CAPSTANS

Used on the ship for mooring or warping operations, the capstan consists of a vertically mounted capstan head of varying diameters that is rotated usually electromechanically (or hydraulically) in order to apply a load/force on the mooring ropes or cables. FEC has furnished capstans to various shipbuilders for U.S. Navy and Coast Guard vessels and continues to expand this product line having added the Virginia Class Submarine (VCS) capstans to our commodities list.

WINCHES

Similar to capstans in some respects, winches usually involve a rotating drum which also allow stowage of ropes or cables. FEC furnishes a variety of Navy standard winches in accordance with build-to-print NAVSEA drawings including gypsy, saddle, spanwire, anti-slack device (ASD), barricade, and stern dock winch assemblies.

SLIDING PADEYES

Navy standard Underway Replenishment (UNREP) gear such as Sliding Padeyes (SPE's) and/or Kingposts manufactured in accordance with NAVSEA build-to-print (BTP) drawings fit well into FEC's deck machinery catalog. FEC can also manufacture BTP related products to help facilitate UNREP operations (e.g., snatch blocks, special fittings & rigging, etc.)

DUMBWAITERS

FEC is the leading provider of dumbwaiters for Navy shipboard use. Dumbwaiters of a variety of sizes, capacities, and travel lengths can be found on many U.S. Navy ship classes.

CONVEYORS & ELEVATORS

For decades, FEC has been the go-to supplier for complex cargo handling systems coupled with a long history providing elevator and conveyor field service and parts to the Navy, Coast Guard and shipbuilders. Whether handling pallets of missiles, bombs or beans, FEC is the leading choice to design, develop and meet the customers' lifting requirements. Most noteworthy is FEC's lead role as the primary supplier of the Advanced Weapons Elevator (AWE) for the new Ford Class aircraft carrier (See AWE section). FEC is also actively involved in other various lift systems on different ship platforms including an ammunition lift system for the new DDG Class.

AIRCRAFT LAUNCH & RECOVERY EQUIPMENT (ALRE)/AVIATION SUPPORT

JBD MANIFOLDS

On aircraft carriers, one of the more distinguishable features on the flight deck is the catapult system's JBD. JBDs are deployed during flight operations while launching aircraft from the catapults. The JBD panels are raised and lowered to provide protection to adjacent aircraft and flight deck personnel from jet blast as taxing aircraft await the pending catapult launch. In order to sustain the significant heat generated by the jet blast, the JBDs are outfitted with cooling modules and manifolds that circulate sea water pumped up from below decks. FEC is a key contributor to aircraft launch and recovery equipment (ALRE) as one of only a couple qualified suppliers to manufacture the JBD Manifolds.

AVIATION GROUND SUPPORT EQUIPMENT

Our expertise extends to other branches of the military, having furnished common ground support equipment (GSE) for the US Army and Air Force. Aviation GSE is utilized to assist in the transport, maintenance and service of aircraft in between flights. FEC has manufactured and tested jet engine trailers and helicopter engine maintenance stands consisting of various steel and aluminum weldment assemblies in accordance with the stringent requirements necessary for handling flight critical engines/components.

HULL CLOSURES/DOORS

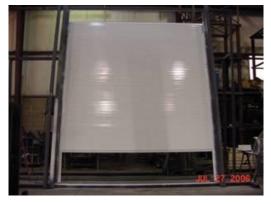

LITTORAL COMBAT SHIPS (LCS) ROLLER CURTAIN DOORS

FEC designed and manufactured the helicopter hangar doors for the LCS Independence variant. These doors are also manufactured from aluminum and rated for 40 psf wind load. These port and starboard roller curtain door assemblies meet all the LCS specification requirements including shock and EMI qualifications.

"DEEPWATER" NATIONAL SECURITY CUTTERS (NSC) ROLLER CURTAIN DOORS

The NSC Class ships also prominently display FEC helicopter hangar doors on the flight deck. These heavy duty helicopter hangar door systems are an allaluminum construction rated to sustain a 40 psf wind loading.

T-AKE CLASS SHIPS ROLLER CURTAIN DOORS

FEC furnished all fourteen shipsets of the T-AKE hangar door assemblies. These doors consisted of flight deck/cargo doors with stainless steel roller curtains as well as helicopter hangar door assemblies rated at 60 psf.

FEC also produced the A-60 rated "Fire Doors" for the T-AKE class ships. The fire doors are electromechanically operated solid panels and are utilized to separate the helicopter hangar area from the interior cargo handling spaces. The doors are fabricated using steel plate with A-60 fire rated insulation applied between the vertical and horizontal door stiffeners. An expandable "fire seal" is present around the perimeter of each door to provide a seal with the adjoining bulkhead to prevent the passing of heat and smoke in the event of fire. These doors have been fully tested and certified to meet the A-60 fire door rating requirements.

HELICOPTER HANGARS

Federal Equipment Company has emerged as a leader in supplying, repairing and installing vertical rolling doors for both the United States Coast Guard and Navy. Federal Equipment Company supplies all repair parts for the helicopter hangar doors either directly from the OEM or manufactured inhouse to exceed OEM requirements.

CONTROLS

HUMAN MACHINE INTERFACE (HMI)

One of the more notable features on FEC's Advanced Weapons Elevator (AWE) system is the first fully qualified Human Machine Interface (HMI) Operator Stations. These unique panels are the first touchscreens implemented on an aircraft carrier that have successfully undergone all the exhaustive tests to meet EMI, shock, and vibration requirements necessary for use in a shipboard weapons system. The HMI provides a user-friendly multi-screen interface while allowing more panels and data to be displayed at multiple deck locations simultaneously in a much more compact space relative to traditional panels. The software-based HMI application also permits added flexibility, troubleshooting and maintenance capabilities.

Adaptable for use in other material and weapons handling systems, the HMI operator stations increase ship's force control and communication as well as system monitoring and diagnostics to maximize operational functionality and readiness.

CONTROL PANELS

Motor controllers, operator stations, power panels, disconnect switches/ panels, and junction boxes can all be furnished by FEC in accordance with the invoked electrical system specifications. FEC has significant experience with electrical enclosures of all kinds and can perform the electrical design, assembly and testing required to ensure our deck machinery meets the fit, form and function desired for Navy shipboard use.

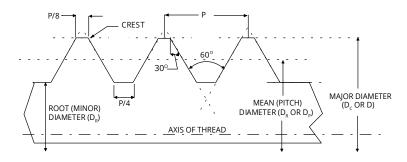

PROGRAMMABLE LOGIC CONTROLLERS (PLCs)

Today many shipboard systems have increased automation requiring digital controls, solid state relays in lieu of electromechanical relays, and invoke PLCs for increased service life, reliability, flexibility, and compatibility with newer technology. FEC has a solid background incorporating PLCs in weapons and material handling systems, particularly in the elevator and conveyor arena.

Current (ampacity) Notes: The current ratings shown in the table are for power transmission and have been determined using the rule of 1 amp per 700 circular mils, which is a very conservative rating
